Aluminum – Spring Loaded Air Terminals

Common use where window washing equipment is used, etc. Spring-Mount prevents damaging or breaking of fixed Air Terminals, or in mid-roof areas where Air Terminals may be subject to breakage and/or personnel safety considerations. The stainless-steel spring allows a 90 degree tilt in any direction and has a safety tether that can be attached to an air terminal base bolt, in case of breakage. Easily retrofits to existing Lightning Protection System. Air Terminal length is determined after the spring adaptor.
